REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a method and a telecommunication system for data packet numbering in packet switched data transmission in connection with a handover. Each independent claim identifies the uniquely distinct features: regarding claim 1, in which responsibility for a connection is transferred from a connection between a mobile station and a first wireless telecommunication network to a connection between said mobile station and a second wireless telecommunication network, in which first wireless telecommunication network a data packet number space available for data packet numbering is bigger than a data packet number space of the second wireless telecommunication network, the method comprising the steps of: restricting data packet numbering in the first wireless telecommunication network such that numbers of the data packets of the first wireless telecommunication network do not exceed a maximum value of the data packet number space of the second wireless telecommunication network; regarding claim 12, in which first wireless telecommunication network a data packet number space available for data packet numbering is bigger than a data packet number space of the second wireless telecommunication network, wherein in the first wireless telecommunication network data packet numbering is arranged to be restricted such that numbers of the data packets of the first wireless telecommunication network do not exceed a maximum value of the data packet number space of the second wireless telecommunication network; regarding claim 23, terminal being arranged in a packet-switched data transmission to transfer a responsibility for a connection handover from a connection between said mobile station and a first wireless telecommunication network to a connection between said mobile station and a second wireless

telecommunication, in which first wireless telecommunication network a data packet number space available for data packet numbering is bigger than a data packet number space of the second wireless telecommunication network, wherein the terminal is arranged to restrict data packet numbering of the data packets to be transmitted such that numbers of the data packets do not exceed a maximum value of the data packet number space of the second wireless telecommunication network; regarding claim 35, a network element is arranged, when a responsibility for a connection is transferred (handover) from a connection between said mobile station and said first wireless telecommunication network to a connection between said mobile station and a second wireless telecommunication network having smaller data packet number space available for data packet numbering than in the first wireless telecommunication network, to restrict data packet numbering of the data packets to be transmitted such that numbers of the data packets do not exceed a maximum value of the data . The closest prior art, Hanson et al. (US 6,546,425), Roobol et al. (US 6,301,479), Sipila et al. (US 6,134,439) disclose conventional telecommunication communication systems, either singularly or in combination, fail to anticipate or render the above features obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
